

Creating Material Solutions

MDM East
Booth 1949

Specializing in polyurethane technology, AdvanSource Biomaterials offers targeted polymer synthesis and materials expertise to optimize your end-product functionality.

- Antimicrobial polymers • Aliphatic & aromatic ether-based elastomers
- Thermoplastic polycarbonate urethanes

Whether you're developing thin films, layered extrusions or coatings for improved biocompatibility, heightened lubricity or drug delivery, AdvanSource Biomaterials can tailor materials to the traits most important to your final device.

- Custom synthesized solutions • Hydrophilic coatings • Liquid polymers

From meeting the need for dimensional stability, ease of manufacturability and demanding physical properties to overcoming environmental stress cracking (ESC), AdvanSource Biomaterials delivers biodurable medical-grade materials for use in both long and short term devices.

- Rapid prototype development • Dissimilar material bonding agents • Homogenous colorant technologies

*From structural engineering polymers to solution-based coatings,
AdvanSource Biomaterials technology completes the puzzle.*
